RUST STOP

MASTON RUST STOP anti-corrosive agent puts an efficient end to corrosion. For optimum results: Clean the surface to be treated thoroughly from any dirt, oil and loose rust. Mix the agent carefully and apply on rust using a brush. Within moments the treated surface starts turn black. This is a sign that the rust prevention process has begun. Depending on the conditions and surface, corrosion process stops within 1-3 hours after treatment (+20 °C). Polish any unevenness in the surface. Remove the dust and clean the surface with Maston Acetone. Fillers, rust protection primers, ordinary primers or paint can be applied on top of the film. Suitable also on galvanized metal.
